Experience

DEVCON Manila Chapter **July 5, 2026 - Present**

Frontend Developer *Quezon City, Metro Manila*

- Volunteered to become a remote frontend developer for the DEVCON Tech Office, specializing in Next.js, React, Tailwind, and shadcn for creating a friendly UI assigned to the Event Website Department.
- Helped visualize the current project workflow and designed system architecture using flowcharts, UI designs using Figma, and diagrams for requirements alignment and project visualization.
- Developed a project management website referencing a Kanban Board for tracking and monitoring projects, designed for all members of the event website department for centralized task delegation.

HumAIn **May 25, 2026 - July 30, 2026**

AI Engineer Intern *Quezon City, Metro Manila*

- Developed and optimized highly customizable, multi-modal AI Voice Chat Agents tailored for diverse enterprise use cases, including automated interviewers, receptionists, and smart schedulers.
- Enhanced user immersion by integrating real-time live tone analysis and dynamic voice-type configurations (e.g., Zephyr), significantly improving conversational naturalness and empathy detection.
- Architected and implemented an AI Agent Scheduler utilizing an n8n workflow from Google Cloud Console and an API for data. Automated synchronization of real-time client bookings with Google Calendar seamlessly.
- Programmed SaaS (Software as a Service) and an Nx Monorepo for integration of all systems in one repo. Using Angular, TypeScript, and JavaScript for development; Gemini Live API for voice settings.
- Authored advanced system prompts and engineered context-aware guardrails to build highly unique, brand-aligned AI personas with minimal response latency for potential clients and use cases.

Projects

eHakbang: Your Digital Life-Event Guide *https://ehakbang-app.vercel.app/*

System Designer/Full-Stack Developer

- Developed the Hackathon project using OpenAI API, EGOV API, Next.js, PostgreSQL, Node.js, and Git.
- Designed a life event–driven digital service that helps citizens navigate the government processes triggered by major life events, such as marriage, childbirth, employment, retirement, or winning a lottery.
- Came up with the idea and designed how the system flow would be, from authentication, data processing utilizing the EGOV API for integration, and the system's potential impact on the community.
- Integrated with the EGOV SSO API for authentication, liveness check, EGOV AI for centralized information processing, chatbots, and the eMessages API. With these integrations and through the technical evaluation, we became one of the Top 30 Finalists of the EGOVPH Hackathon 2026 nationwide.

PlantCam: Mobile-Based Plant Disease Detection *https://plantcam-promotional.vercel.app/*

Full-Stack Developer

- Built the project using JavaScript, Python, TensorFlow, Tailwind CSS, React.js, and MIT App Inventor.
- Engineered an AI-driven plant disease diagnostic system, split into a responsive frontend promotional platform and a functional mobile application. Using Google Colab, created a skilled AI model for disease identification using Python and TensorFlow, with careful evaluation and guardrails for AI response and output.
- Integrated instant diagnostic insights after image capture, providing prevention steps and descriptions.

Skills

- **Technologies:** JavaScript, Java, SQL, PostgreSQL, PHP, C#, React.js, Next.js, Vite, .NET, Python, Git, GitHub
- **Focus:** Full-Stack Development, AI Agent Orchestration, UI/UX Design, Software Architecture
- **Certifications:** GitHub Foundations, Legacy Responsive Web Design (freeCodeCamp), Exploratory Testing + Mob Testing, DataCamp AI Fundamentals, DataCamp Data Literacy, AI Career Readiness, Agentic AI Developer

Education

Quezon City University | Bachelor of Science in Information Technology **2023 – Present**

- Key Achievement: EGOVPH Hackathon 2026 Top 30 Finalist (Representing QCU)

Rosario Institute | ICT with Specialization in Computer Programming **2019 – 2021**

- Graduated with High Honors
